---

Dear Hiring Manager,

I am writing to express my keen interest in the AI/ML Engineer, Innovation Lab (AI & Analytics Lab), Business Technology position advertised on JobStreet. With a Bachelor of Science (Hons.) in Mathematics (Data Science) and extensive experience in the banking industry, I bring a strong background in ECL computation, data automation, and advanced analytics.

In my current role at Export Import Bank of Malaysia Berhad, I have successfully established data processing automation and implemented supervised machine learning models for loan growth and customer churn prediction. I also developed interactive BI dashboards that enabled real-time decision-making and contributed to regulatory compliance through ECL analysis and reporting. My work has extended to sustainability initiatives, including Scope 1 and Scope 2 carbon emissions calculations.

Previously, at Maybank Islamic Berhad, I transitioned data analytics processes from SAS to Python, yielding significant cost savings. I managed credit risk portfolio reporting, migration analysis, and BNM reporting, ensuring compliance with Basel III and MFRS9 frameworks. My technical proficiency spans Python, SAS, SQL, Power BI, Tableau, and Microsoft Azure Machine Learning, complemented by certifications such as Microsoft Certified Azure Data Scientist Associate and PL-300 Power BI Data Analyst.

I am confident that my expertise in data science, risk management, and regulatory reporting aligns with the requirements of your organization. I am eager to contribute to your team's success by leveraging my skills in data-driven decision-making, process improvement, and advanced analytics.

Thank you for considering my application. I look forward to the opportunity to discuss how my background and skills can add value to your organization.

Sincerely,
Muhammad Syahid Bin Abd Halid
